

Serene Plummer

+1 (214) 597-9313 | serenepmr@gmail.com | Frisco, TX, USA | linkedin.com/in/serenep | serene4444.github.io/myPortfolio/

EDUCATION

University of North Texas
Bachelor of Science (BS), Computer Science

May 2024 - May 2028
GPA: 4.0

SKILLS

- AI & Machine Learning:** Machine Learning, Deep Learning, Neural Networks, NLP, Generative AI, AI Agents, Prompt Engineering, OpenAI, Keras, PyTorch, TensorFlow, LLMs, LLM, MCP
- Frameworks & Libraries:** Pandas, Flask, NumPy, Scikit-learn
- Software Engineering & Tools:** Docker, Git, GitHub, GitHub Actions, REST APIs, API Development, Linux/Unix, FastAPI, Maven, Snowflake, ETL, JSON, Bash, IntelliJ, JUnit, AWS, Go, Microsoft Azure, Data Structures & Algorithms, Agile, Oracle
- Languages:** TypeScript, Python, Java, C++, SQL
- Languages:** English

WORK EXPERIENCE

Fidelity Investments
Software Engineer Intern

Jun 2026 - Aug 2026
Westlake, TX, USA

- Engineered **AI-powered agents with RAG, MCP integrations, and prompt engineering** to automate code quality and testing workflows, contributing to a **60% reduction in deployment cycles**.
- Developed **Java and Spring Boot test automation** integrated with **Oracle and MySQL**, identifying defects earlier and reducing manual QA effort across enterprise applications.
- Collaborated with **software engineers and stakeholders** using **Git version control, Jira, CI/CD, and DevOps practices** to streamline development workflows and improve release reliability.

iCode School
STEM & Coding Instructor

Aug 2025 - Present
Mckinney, TX, USA

- Provided individualized mentorship and performance coaching to students, driving a 35% improvement in problem-solving skills and promoting collaborative learning, critical thinking, and effective teamwork in STEM and robotics-based projects.
- Designed and delivered interactive lessons in Scratch, robotics, artificial intelligence concepts, digital logic, mainframe computing, beginner programming, and prompt engineering.
- Increased student engagement scores by 40% while simplifying complex technical concepts through hands-on projects, creative problem-solving, and age-appropriate instruction.

Common Point
Data Analytics Intern

Jan 2026 - May 2026
New York, NY, USA

- Architected and implemented automated data analysis workflows using **AI-driven tools and Google Cloud Platform (GCP)** to enhance processing efficiency and streamline organizational research efforts.
- Developed systematic frameworks to synthesize qualitative and quantitative data, utilizing advanced categorization and coding to extract actionable trends for data-driven decision-making.
- Engineered and maintained **high-fidelity datasets** by cleaning, structuring, and auditing data to ensure accuracy for large-scale research and predictive analysis, leveraging **Tableau** to visualize and communicate key insights.

IDX Exchange
AWS Cloud Engineer

Sep 2026 - Present
Boise, ID, USA

- Architected production-grade AWS cloud infrastructure** across EC2, S3, RDS, DynamoDB, VPC, Lambda, API Gateway, and ECS Fargate, implementing least-privilege IAM, scalable networking, load balancing, and auto-scaling to support secure, highly available applications.
- Automated infrastructure and deployments with Terraform and GitHub Actions**, implementing keyless AWS authentication, secrets management, monitoring, and automated workflows to create repeatable, secure, and reliable cloud deployments.
- Strengthened cloud reliability and operational efficiency** through cost optimization, data governance, monitoring, and disaster-recovery strategies, reducing manual infrastructure management and establishing a resilient foundation for scalable software systems.

PROJECTS EXPERIENCE

SpaceX Mission Success Predictor - [Link to project](#)

Jul 2025 - Jul 2025
Independent Leader

- Developed and evaluated three machine learning classifiers**—SVM, Decision Tree, and k-NN—in Python to predict SpaceX mission outcomes, achieving **95% classification accuracy** on real-world launch data through model comparison and feature analysis.
- Built an end-to-end data pipeline** using web scraping, data wrangling, feature engineering, and exploratory data analysis to process **2,500+ mission records**, transforming raw launch data into structured datasets for predictive modeling.
- Accelerated data analysis by 60%** through optimized preprocessing and analytical workflows, using statistical analysis and data visualization to identify **launch trends, mission patterns, and factors influencing mission outcomes**.

Real-Time Sentiment Analytics Platform - [Link to project](#)

Apr 2026 - May 2026

- Developed and deployed a full-stack AI application leveraging Natural Language Processing (NLP) to perform real-time sentiment and emotion analysis on unstructured text.
- Designed and implemented a Python/Flask backend with REST APIs to integrate machine learning inference into a responsive user interface, enabling seamless AI-powered interactions.
- Engineered modular text-processing pipelines for preprocessing, inference, and structured output generation, improving maintainability and supporting scalable AI application development.

Stellar Genesis - [Link to project](#)

Aug 2026 - Present

- Built a cinematic **space clicker game** where players generate resources, evolve planets, research technologies, automate production, and expand a growing solar system; transformed the initial concept into a **stable, user-ready application within 2 days** using **Claude Code, AI-assisted ideation, and Figma-driven design**.
- Engineered the game with **React, TypeScript, Vite, and Zustand**, implementing modular state management, custom game-loop logic, persistent saves, and data-driven progression systems to deliver a polished, scalable experience for users.
- Designed an accessible, attention-friendly learning experience** using short gameplay loops, progressive goals, visual feedback, and bite-sized educational content to teach players about **solar-system formation, planetary evolution, space technologies, and astronomy** through interactive gameplay.
